

Diagonal move

Vertical pairs

Pass, forward run and lay-off from pivot

Diagonal move

An attacker runs off the marker (not necessarily after a pass) into space behind the defensive line in order to receive a diagonal ball from the team-mate in possession. This move is known as a 'diagonal' because the ball is received diagonally relative to the horizontal and vertical axes.

Vertical pairs

This includes game situations with two players where one is much deeper than the other, creating a large space between the defensive lines. In 'horizontal' pairs, the players work together in a 2v2 against the same line of defence, whereas playing in 'vertical' pairs they play in a 2v2 against defenders from different lines of defence.

Play between the pivot and one other player

This applies to all match situations with vertical pairs formed by a player passing the ball and the pivot, who receives the ball from deep.

Elementary technical/tactical options for two players

A straightforward numerical advantage of 2vGK and 2v1. These advantages mainly arise from an attacking transition or when the line of defence has been broken, which creates a temporary numerical advantage until the defensive line drops back and reorganises.

Basic technical/tactical options for two players in an attacking transition situation

A 2v2 in a positional attack against an organised defence is not the same as an attacking transition where both attack and defence have equal numbers.

Three-player attack (with pivot):

Generally speaking, all moves involving the pivot are executed with two players making a forward run. There are various options to three-way-play, just as there are with vertical pairs including the pivot. However, in this scenario more options are available due to a second player making a forward run.

Technical/tactical attacking options for three players

Pass to pivot with two players making a forward run (at back post or outside the area)

Pass to pivot with two players making a forward run (at back post or overlap)

Playing in pairs with pass to pivot allowing two players to make forward runs
