

3v3 in a 28x20m playing area, bringing the ball out under pressure and finishing on either goal, with restrictions

24

LEARNING UNIT
Small-group technical/tactical options. Direct counter-attacking and finishing on goal quickly.

PHASE
Skills acquisition.

CONTENT
Core individual attacking and defensive concepts. Elementary (2v1, 3v2) and basic (2v2, 3v3) small-group technical/tactical options. Peripheral vision of the surrounding area. Speed and accuracy in executing technical skills.

OBJECTIVES
To use and manage basic small-group technical/tactical options to develop play. To use elementary small-group technical/tactical options to create opportunities for finishing on goal quickly in situations where the attack outnumbers the defence in a 2v1 or a 3v2. To manage changing situations in the game space and field of vision, and thereby come up with solutions and create situations that enable opportunities to finish on goal quickly.

- NUMBER OF PLAYERS**
9 plus goalkeepers.
- DRILL DESCRIPTION**
- 3v3 in a 28x20m playing zone.
 - Whenever the ball goes out, play restarts from one of the goals.
 - The team in possession has to cross the halfway line as if attacking the other goal, at which point they can attack either of the goals.
 - Teams can change the direction of their attack whenever they see an opportunity to create a numerical advantage.
 - There is a time limit on each attack: after crossing the halfway line, the attacking team has four to six seconds in which to finish on goal.
 - Three teams of three players who rotate every three minutes.

- VARIATIONS**
- Limit the number of passes allowed in setting up an opportunity to finish on goal after crossing the halfway line (maximum of one).
 - Teams work on basic small-group technical/ tactical options (in a 2v2 and 3v3), learning how to play their way out when under pressure from the opposition, as well as on elementary technical/tactical options (1vGK, 2v1, 3v2), learning how to take advantage of numerical advantages in the final third.

Drills with 2v2, 3v3, and 4v4, substituting the player who loses possession

25

LEARNING UNIT
Small-group technical/tactical options in counter-attacking.

PHASE
Skills acquisition/proficiency.

CONTENT
Core technical/tactical concepts. Command of peripheral vision of the surrounding area

in situations where there is an equal number of players and where there is a numerical advantage. Small-group technical/tactical options.

OBJECTIVES
To encourage players to make a quick switch in transition after regaining possession of the ball in order to make the most of a numerical advantage as quickly as possible. To work on elementary, basic and complex small-group technical/tactical options.

- NUMBER OF PLAYERS**
9-12 plus goalkeepers.
- EQUIPMENT**
Balls and bibs.
- DRILL DESCRIPTION**
- Play begins with a 2v2 in a 28x20m playing area and three substitutes per team, positioned behind the goal line opposite to the goal their team is defending. The game is always played with a 2v2; a player who loses possession must swap with a substitute and cannot participate in the defensive transition after losing the ball. This rule ensures that the game is played with a 2v1 plus a defender running back to defend (i.e. the substitute entering the court). Two games are played lasting three minutes each.
 - Another two games with the same rules are played lasting three minutes each. This time, the game is played with a 3v3 and two substitutes per team behind their respective goal line. This ensures a 3v2 scenario plus a defender running back to defend.
 - For the last two games (again three minutes), a 4v4 is played plus one substitute per team behind their respective goal line. The rules are the same as for previous variations.

Possession drill with 5v5 in a 20x20m area. Both teams must have a player in each of the 10x10m squares

26

LEARNING UNIT
Group and individual tactics.

PHASE
Sport development.

CONTENT
Occupying and create space. Logically occupying space. Peripheral vision of the surrounding area. Perceptive/decision-making abilities.

OBJECTIVES
To develop and improve visual perception and decision-making in the game with and without the ball. To understand how to occupy space in order to create space and passing angles through elementary and basic small-group technical/tactical options aimed at maintaining possession.

- NUMBER OF PLAYERS**
10.
- EQUIPMENT**
Balls, bibs and cones.
- DRILL DESCRIPTION**
- Divide the half-court into four 10x10m squares.
 - A possession exercise is played with the rule that attackers and defenders must always have at least one player in each square.
 - Players can move freely between the squares in the half-court as long as the previous rule is met. 2v2, 2v1, and 1v2 ball-retention situations and circulation of ball and players.
 - Once players have mastered this exercise, two goals can be introduced and both teams are allowed to finish in either goal once they have made a specified number of passes or have 'overcome' the opposition in each of the four squares.

4v4 in a 20x20m area, splitting into a 2v2 in 10x20m

27

LEARNING UNIT
Small-group technical/tactical options.

PHASE
Skills acquisition.

CONTENT
2v2. Feinting. Quick and accurate execution of technical skills when finishing on goal (control, pass and shoot). Defending against a pair of players.

OBJECTIVES
To make better use of feints when receiving the ball in 2v2 situations, either with back to the defender or when facing them. To adapt finishing techniques to the lack of time and space in game play. To improve the concept of playing in pairs and vertical pairs. To use drill variations to work on elementary small-group technical/tactical options (3v2 and 2v1).

- NUMBER OF PLAYERS**
8-12 plus two goalkeepers.
- DRILL DESCRIPTION**
- 2v2 in each area of the court. Neither defenders nor attackers can leave their playing zone. Both teams can score in either goal.
 - Limit the amount of time that the ball is allowed in each zone. For example, after 8-10 seconds the ball must switch to another zone.
 - Feinting can be worked on when playing in pairs as well as when receiving the ball from another zone; the attacker feinting with the defender at their back.
 - Players making the pass are allowed to move into the zone where their team have taken possession, creating a 3v2 advantage. This player can then only return to their previous zone if a goal is scored; if not, then their team will be outnumbered by 1v2 in their previous zone.
 - Rather than allowing the passer of the ball to switch zones, another option is to allow the player who did not make the pass to switch (decoy run).
